

# EKOseed® TURF

**Mix of microorganisms for turf seeds treatment**

**EKOseed® TURF** is a fertilizer specifically studied for Turf seeds treatment, made up of Mycorrhizae, Rhizosphere Bacteria and Fungi.

The different microorganisms help the seeds to easily reach recalcitrant nutrients in soil, improving their germinability and survival after seedling.

## ADVANTAGES

**Increase in seeds germinability.**

**Improvement in roots growth.**

**Improvement in nutrients absorption.**

**Increase in tolerance to abiotic stresses (water, salt, drought, etc.).**

**Increase in plants self-resistance.**

## APPLICATION RATES

CROPS	RATE	APPLICATION
Turf seeds	100 g/10 kg of seeds	Mix uniformly EKOseed® TURF and seeds.

## COMPOSITION

Mycorrhizae	0,5%
Rhizobacteria ( <i>Pseudomonas spp.</i> , <i>Bacillus spp.</i> )	$6 \times 10^8$ CFU/g
Trichoderma ( <i>Trichoderma spp.</i> )	$3 \times 10^5$ CFU/g

## PACKAGE

Bag	10x200 g
Bag	4x1 kg
Bag	5 kg
